# USD343 Student V2.0.0

Updated version of USD343 Student

- Slide out menu has been redone to use a tableview and the SWRevealViewController library
- Calendar still remains without any google calendar integration per the request of the client
- Nearly all links remain as they previously were (point to outward facing services)
- App now has a task page where students can add assignments and other various tasks into the application without the need of going to the Apple Reminders App. Push notifications not implemented

User Interface designed in Sketch:
